

Nutrient	Typical Analysis per kg
Energy	5.7 MJ/kg
Protein	12.9%
Lysine	5.6 g/kg
Salt	22.0%
Molasses (Maximum)	5.0%
Calcium	8.3%
Phosphorous	4.2%
Magnesium	1.8%
Copper	700 mg/kg
Zinc	1200 mg/kg
Manganese	500 mg/kg
Iron	137 mg/kg
Selenium	5 mg/kg
Iodine	10 mg/kg
Chromium	5 mg/kg
Vitamin A	100,000 IU/kg
Vitamin E	400 IU/kg
Vitamin B1	16 mg/kg
Vitamin B2	40 mg/kg
Vitamin B3	82 mg/kg
Biotin	10 mg/kg
Folate	30 mg/kg

Recommended Feed Intake

(grams per head per day)

Foals.....	50-100g
Weanlings.....	75 to 150g
Yearlings.....	100 to 175g
Adult horses.....	100 to 200g

Directions of Use

Place blocks near watering points. Place enough blocks so horses have ready access to blocks. May be fed in stable, yard or paddock.

Equine Nutrient Components (EqNC) is an Australian owned and Toowoomba (QLD) based company, providing:

- scientifically sound feed supplements
- horse care products
- a wide range of services to the equine industry

The EqNC range of products, designed and formulated by our team of nutrition specialists and veterinarians are scientifically based and researched with an emphasis on factual results and benefits for the horse. Quality nutrition will ensure your horse can be healthy, strong and active.

We welcome ALL enquiries, big and small, and look forward to hearing from you!

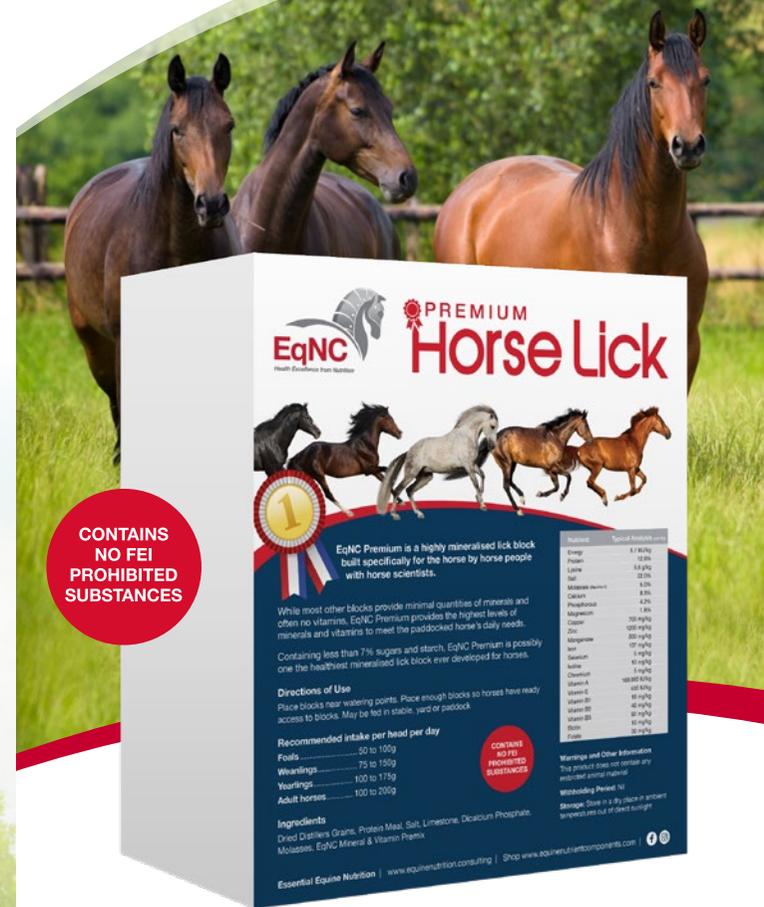

Health Excellence from Nutrition!

PREMIUM Horse Lick

A highly mineralised lick block formulated to put the health of your horse first!

EqNC Premium Mineral & Vitamin Horse Lick Block

So much more than a salt block!

The natural way to feed a horse is grazing grass and pasture in the paddock. Unfortunately, grass and pastures are often low in essential protein and minerals, meaning your horse isn't as healthy as you may think it is.

With most regions deficient in key minerals like calcium, phosphorous, magnesium, copper, zinc, selenium and iodine, the paddocked horse is often depleted in these essential nutrients; and this is when there is good feed in the paddock!

With Australia classified as the driest, inhabited continent in the world, dry weather and droughts are a common occurrence. When grass and pasture is dry and sparse, not only are these essential minerals greatly lacking, the quality and quantity of vitamins is greatly depleted too. While hay can fill the void energy wise, it is often lacking in quality protein, minerals and vitamins.

EqNC Premium is a highly mineralised lick block built specifically for horses. Providing the highest levels of vitamins and minerals to meet the paddocked horse's daily needs, and containing less than 7% sugars and starch, EqNC Premium is possibly one the healthiest mineralised lick blocks available.

The EqNC Premium Horse Lick Block has **3 to 10 times more minerals than the 'average' block**

because we at EqNC put the health of your horse first!

Minerals

Choosing our EqNC Premium Horse Lick Block, you receive one of the healthiest equine lick blocks currently on the market!

Due to our scientifically researched formulation of the EqNC Premium Lick Block, the mineral concentration exceeds its competitors!

Looking at the facts, an average adult horse (not in work), needs at least 100mg of copper, 300mg of zinc, 1mg of selenium and 2mg of iodine per day to perform it's normal, resting physiological functions.

We designed our EqNC Premium Horse Lick Block to provide a minimum of 50% of these daily mineral requirements, with the remainder being obtained from the roughage provided (eg. hay, grass).

Vitamins

The EqNC Premium Horse lick block is also the only highly mineralised lick block with a high vital vitamin content.

In just 1kg of the 15kg blocks there are 100,000 IU of Vitamin A (essential for eyesight and a great anti-oxidant), 400 IU of Vitamin E (outstanding anti-oxidant), 16mg of Vitamin B1, 40mg of Vitamin B2, 82mg of Vitamin B3, 10mg of Biotin (to improve your horses hooves and coat) and 30mg of Folate (to ensure healthy blood formation).

Safe for Laminitic and EMS prone horses!

The EqNC Premium Lick Block has a maximum of 5% molasses, an NSC (Non-Structural Carbohydrates) of less than 7%; making them safe for laminitic and EMS (Equine Metabolic Syndrome) prone horses, 5.7 MJ of energy, which is similar to an average grass hay and 12.9% of protein which is high in Essential Amino Acids.
